

# Jump Index Strategy Pack (2025 Edition)

Jump Indices are synthetic trading instruments that simulate sudden market moves with predictable volatility. Offered only on Deriv, these indices "jump" every 20 minutes on average and are available 24/7.

This guide shares tested scalping, breakout, and momentum setups tailored to Jump 10 through Jump 100.

## Strategy 1: Breakout Setup (Jump 25 Index)

This strategy works best on Jump 25, particularly between 14:00 and 20:00 UTC when volatility is strongest.

- Timeframe: M5 or M15
- Indicators: Bollinger Bands (20,2) or EMA 20/50
- Entry: Wait for price to break and close outside a consolidation box or channel - SL: 2-3 candles below breakout area

- TP: 1.5x risk or trail with previous lows
- Best Days: Sunday, Wednesday

Pro tip: Use volatility spikes after the 20-min jump cycle as confirmation.

## **Strategy 2: Momentum Engulfing (Jump 75**

### **Index)**

Jump 75 offers sharp moves, ideal for momentum scalping around 18:00 UTC.

- Timeframe: M1 or M5
- Entry: Bullish or bearish engulfing candle at a key level (S/R, fib, or trendline) - SL: Just beyond the engulfed candle
- TP: Fixed 1:2 RR or close on opposite engulfing
- Best Days: Thursday, Monday

Use volume spikes and price rejection wicks as extra confirmation.

## **Strategy 3: Micro Scalping with Tick Logic (Jump 100**

### **Index)**

Jump 100 moves fast but in small ranges - perfect for high-frequency bots or manual micro scalps.

- Timeframe: Tick chart or M1
- Logic: Look for sequences of 3+ same-direction candles after a stall
- Entry: Enter on next continuation candle
- SL: Tight - no more than 2-3 ticks
- TP: Fixed \$0.20-\$0.50 depending on equity
- Best Time: 07:00 UTC, Wednesday-Thursday

Ideal for compounding small accounts with fast execution and discipline.
